Experience

Software Engineering Contractor — Handshake AI

Jul 2026 – Present

- Designed and refined challenging software-engineering tasks requiring multi-step reasoning, debugging, and domain-specific problem solving for AI agents.
- Built reproducible task environments, reference solutions, and automated verifiers to evaluate AI-agent outputs against task-specific correctness requirements.
- Tested task specifications and verification logic through **CI-based evaluation**, identifying edge cases and debugging failures to improve evaluation reliability.

Education

KL University, Vijayawada

Bachelor of Technology in Computer Science and Engineering

Aug 2023 – Jul 2027

CGPA: 9.40/10.0

Technical Skills

Languages: Java, C++, Python, JavaScript

Backend & APIs: Spring Boot, Spring Security, Spring WebFlux, REST APIs, Hibernate/JPA, Node.js, Express.js

AI Engineering: LLM APIs, Prompt Engineering, RAG, AI Agents, MCP, Tool Calling

Databases & Messaging: PostgreSQL, MySQL, MongoDB, Redis, Apache Kafka

Cloud & DevOps: Docker, Kubernetes, Jenkins, GitHub Actions, Prometheus, Grafana

Core CS: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, Distributed Systems, System Design

Projects

PayFlow — Distributed Payment Processing Platform

GitHub

Java 21, Spring Boot, PostgreSQL, Redis, Kafka, Docker

- Built a **distributed payment platform** supporting wallet creation, fund transfers, and transaction tracking through secure REST APIs.
- Designed a **double-entry ledger** with idempotent transactions and pessimistic row-level locking, sustaining **450 TPS** under 50+ concurrent threads with zero data inconsistencies.
- Implemented **Kafka + Transactional Outbox** for reliable event publishing and asynchronous fraud checks/notifications with end-to-end latency below **85 ms**.
- Added JWT authentication, Redis rate limiting, Prometheus/Grafana monitoring, and K6 load testing, supporting **800+ concurrent users** with **p99 latency below 120ms**.

Nexa Bank — AI-Native Banking Platform

[GitHub](#)

Java 21, Spring Boot, Microservices, Kafka, PostgreSQL, Redis, MCP, RAG, AI Agents

- Built a **cloud-native banking platform** using Spring Boot microservices and REST APIs for account, transaction, and customer operations.
- Developed an **AI agent architecture with MCP tools** to securely invoke banking backend capabilities through natural-language requests.
- Implemented **RAG and LLM tool calling** over banking policies and knowledge sources to support context-grounded, multi-step workflows.
- Integrated Kafka-based event processing, Docker/Kubernetes deployment, and application monitoring.

FitLife AI — AI-Powered Fitness Platform

GitHub

React, Spring Boot, MySQL, Gemini AI, Docker, Kubernetes

- Built an **AI-powered fitness platform** delivering personalized workout and nutrition recommendations.
- Integrated **Google Gemini AI** to generate adaptive coaching plans based on user goals and activity history.
- Implemented secure **JWT Authentication** and **RBAC Authorization** for role-based access control.
- Containerized services using **Docker** and deployed workloads on **Kubernetes** with autoscaling support.

Achievements

- Google Big Code Challenge:** National Top 1,500 — **Top 1%** among 150,000+ qualifiers.
- LeetCode Knight:** Highest Rating 2008 | Global Top 2.53%.
- CodeChef 5-Star Programmer:** Highest Rating 2038.
- Solved **1,300+ DSA problems** across LeetCode, CodeChef, and GeeksforGeeks.

Certifications

Microsoft Certified: Azure Solutions Architect Expert | SAP Certified Generative AI Developer | Oracle Cloud Infrastructure Architect Associate
